

The **BRICK®** is the building block of ADDCO's variable message signs. The easiest and cost efficient multipurpose solution from Imago. It can be built up vertically or horizontally in any quantity to suit your application. We can build exactly the size and density sign needed for your project.

As durable as, well...a BRICK®!

BRICK® signs don't require costly bulky enclosures to protect them. **BRICK®**s are sealed and impervious to dirt, moisture and road grime. They are available in full-matrix, line-matrix and character-matrix configurations.

The light weight and flexibility of the **BRICK®** are important factors when considering maintenance and worker safety.

BRICK®VMS provides superior value by:

- Eliminating the need for costly and unnecessary walk-in enclosures
- Consuming 80% less power than VMS with a walk-in enclosure
- Eliminating the need for fans, filters, and environmental controls
- Requiring 87% less structural support
- Being configured to meet customer dimensions
- Integrating seamlessly into existing applications
- Eliminating seasonal maintenance
